

For vigorous plants you need to get to the root of the issue. Literally.

For every plant there is a supportive root base. Westbridge has a complete line of sustainable inputs that will help you keep all your bases covered.

Effective organic and sustainable fertilization programs help build healthy soil-root systems by promoting microbial growth and providing the essential nutrients for healthy plants.

Westbridge programs are designed for rapid uptake, supplying important nutrients to the plant when it matters most. Westbridge liquid nutritional products can be used with either soil or foliar fertilization programs. The products can be tank-mixed with most other plant protection products and applied through all types of spray and irrigation systems. When used together, these products work synergistically to improve plant development, enhance photosynthesis and prevent nutrient deficiencies.

Westbridge has been a leader in specialty products for growers since 1982. Our extensive line of organic and sustainable nutrients, surfactants and biopesticides makes us the grower's advantage.

THE WESTBRIDGE NUTRITIONAL PROGRAM

Organic TRIGGRR®

Organic TRIGGRR® provides plants with the energy boost they need by increasing photosynthesis. More energy in the plant means better nutrient uptake and a stronger root system. Stronger plants are more productive and less susceptible to environmental stresses which can lead to disease. Use Organic TRIGGRR® with our Organic BioLink® nutritional program for better quality and higher yields.

Organic BioLink® All-Purpose Fertilizer 3-3-3

Organic BioLink® All-Purpose Fertilizer 3-3-3 is high in amino acid content for *rapid* uptake and *quick* response time. It improves plant vigor, transplant shock recovery time, and flower and fruit production. Available with and without micros, Organic BioLink® is designed to complement Organic TRIGGRR®.

Organic BioLink® Cal Plus

Organic BioLink® Cal Plus is chelated calcium that delivers. It is completely soluble for rapid root and leaf uptake and can also reduce soil salinity by displacing the "bad" salts. Calcium promotes root and leaf development and overall plant vigor.

Organic BioLink® Micronutrient Fertilizer

Organic BioLink® Micronutrient Fertilizer provides essential micronutrients when the plant physiologically needs them. Organic BioLink® Micronutrient Fertilizer is designed to move to the part of the plant that is actually growing – whether it is a flower, shoot or root.

- Liquid N-P-K fertilizers
- Micronutrient fertilizers
- Calcium fertilizers
- Biopesticides & spray adjuvants
- Soil & plant amendments
- Insect repellent

Specializing in Organic and Sustainable Products since 1982
