Westbridge Fosters Food Safety by Implementing Stringent Product Safety Measures

VISTA, CA (October 6, 2009) -- Westbridge Agricultural Products Fosters Food Safety by adopting stringent manufacturing product safety policies.

Recently the Food and Drug Administration drafted guidances designed to “minimize or eliminate microbial contamination in tomatoes, leafy greens, and melons.” One element includes:

Recommendations for recordkeeping, including some that will help the
FDA determine more quickly the source of outbreaks that do occur
(FDA, July 31, 2009)

Westbridge Agricultural Products, which manufactures fertilizers under the TRIGGRR[®], Organic BioLink[®], and SUNBurst[®] tradenames, is being proactive in order to support growers who want to incorporate the FDA’s recordkeeping recommendations in their growing practices. Implementing stringent manufacturing product safety policies, Westbridge obtains independent pathogen reports to ensure that all products shipped to its customers are pathogen-free. Westbridge will provide pathogen reports to their customers upon request.

To find out more about Westbridge Agricultural Products, call (800) 876-2767 or visit their website at www.westbridge.com.
